			• <sup>2</sup> interpret shape	• <sup>2</sup> parabola with a minimum turning point at $x=1$				
Note	s:							
	1. $\bullet^1$ and $\bullet^2$ are only available for attempting to draw a 'parabola'.							
Com	monly	Obse	rved Responses:					

Q	Question		Generic scheme	Illustrative scheme	Max mark
6.	(a)		<ul> <li>•<sup>1</sup> use compound angle formula</li> <li>•<sup>2</sup> compare coefficients</li> </ul>	• $k \cos x^{\circ} \cos a^{\circ} - k \sin x^{\circ} \sin a^{\circ}$ <b>stated explicitly</b> • $k \cos a^{\circ} = 2, k \sin a^{\circ} = 3$ <b>stated explicitly</b>	4
			<ul> <li><sup>3</sup> process for k</li> <li><sup>4</sup> process for a and express in required form</li> </ul>	• $\sqrt{13} = \sqrt{13} \cos(x + 56 \cdot 3)^{\circ}$	

Notes:

1. Accept  $k(\cos x^{\circ} \cos a^{\circ} - \sin x^{\circ} \sin a^{\circ})$  for •<sup>1</sup>.

Treat  $k \cos x^{\circ} \cos a^{\circ} - \sin x^{\circ} \sin a^{\circ}$  as bad form only if the equations at the  $\bullet^2$  stage both contain k.

- 2. Do not penalise the omission of degree signs.
- 3.  $\sqrt{13}\cos x^{\circ}\cos a^{\circ} \sqrt{13}\sin x^{\circ}\sin a^{\circ}$  or  $\sqrt{13}(\cos x^{\circ}\cos a^{\circ} \sin x^{\circ}\sin a^{\circ})$  is acceptable for  $\bullet^{1}$  and  $\bullet^{3}$ .
- 4. •<sup>2</sup> is not available for  $k \cos x^\circ = 2$ ,  $k \sin x^\circ = 3$ , however •<sup>4</sup> may still be gained. See Candidate F.
- 5. Accept  $k \cos a^{\circ} = 2, -k \sin a^{\circ} = -3$  for  $\bullet^2$ .
- 6. •<sup>3</sup> is only available for a single value of k, k > 0.
- 7. •<sup>4</sup> is not available for a value of a given in radians.
- 8. Accept values of *a* which round to 56.
- 9. Candidates may use any form of the wave function for  $\bullet^1$ ,  $\bullet^2$  and  $\bullet^3$ .

However,  $\bullet^4$  is only available if the wave is interpreted in the form  $k\cos(x+a)^\circ$ .

10. Evidence for  $\bullet^4$  may not appear until part (b).

Q	Question		Generic scheme	Illustrative scheme	Max mark
11.	(a)		• <sup>1</sup> express $A$ in terms of $x$ and $h$	•1 $(A=)$ 16 $x^{2}$ +16 $xh$	3
			• <sup>2</sup> express height in terms of $x$	$\bullet^2  h = \frac{2000}{8x^2}$	
			• <sup>3</sup> substitute for <i>h</i> and complete proof	• <sup>3</sup> $A = 16x^{2} + 16x \times \frac{2000}{8x^{2}}$ leading to $A = 16x^{2} + \frac{4000}{x}$	
Note	s:				
			es who omit some of the surfaces of th	e box, only •² is available.	
	(b)		• <sup>4</sup> express <i>A</i> in differentiable form	• $16x^2 + 4000x^{-1}$	6
			• <sup>5</sup> differentiate	• <sup>5</sup> $32x - 4000x^{-2}$	
			<ul> <li>equate expression for derivative to 0</li> </ul>	• $32x - 4000x^{-2} = 0$	
			• <sup>7</sup> process for $x$	•7 5	
			• <sup>8</sup> verify nature	<ul> <li><sup>8</sup> table of signs for a derivative (see below) ∴ minimum</li> </ul>	
				or $A''(x) = 96 > 0 \implies$ minimum	
			• <sup>9</sup> evaluate A	• <sup>9</sup> <i>A</i> = 1200 or min value = 1200	

#### Notes:

- 4. For a numerical approach award 0/6.
- 5. •<sup>6</sup> can be awarded for  $32x = 4000x^{-2}$ .
- 6. For candidates who integrate any term at the •<sup>5</sup> stage, only •<sup>6</sup> is available on follow through for setting their 'derivative' to 0.
- 7. •<sup>7</sup>, •<sup>8</sup> and •<sup>9</sup> are only available for working with a derivative which contains an index  $\leq -2$ .
- 8.  $\sqrt[3]{\frac{4000}{32}}$  must be simplified at  $\bullet^7$  or  $\bullet^8$  for  $\bullet^7$  to be awarded.
- 9. •<sup>8</sup> is not available to candidates who consider a value of  $x \le 0$  in the neighbourhood of 5.
- 10. •<sup>9</sup> is still available in cases where a candidate's table of signs does not lead legitimately to a minimum at  $\bullet^8$ .
- 11.  $\bullet^8$  and  $\bullet^9$  are not available to candidates who state that the minimum exists at a negative value of X. See Candidates C and D.

For the table of signs for a derivative, accept:

- For this question do not penalise the omission of 'x' or the word 'shape'/'slope'.
- Stating values of A'(x) in the table is an acceptable alternative to writing '+' or '-' signs. Values must be checked for accuracy.

• The only acceptable variations of A'(x) are: A',  $\frac{dA}{dx}$  and  $32x - 4000x^{-2}$ .
